Title
SPACE COUNTER BRANCHOLA STORE DESCRIPTION AND ADMINISTRATION AND ADMIN
                                            You have been given the task of making the content on a social media platform more user-friendly. Your task is to find and return an integer value
                                            representing the count of the number of spaces in a given string S.
                                            Input:
                                            A string S
  ,8R23CDC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          22 3BR)
                                            Output:
                                            Return an integer value representing the count of the number of spaces in a given string S.
    3CD02A2
                                            Example:
                                            Input:
                                           Hello World Hey
                                            Output:
                                           2
  BRASCOE
                                                                                                                                                                                                                                                                                                                                                                                                                                                       *C007*
                                   Source Code:
                                             def count_spaces(S):
                                                             return S.count(' ')
    3CD02A
                                             # Example usage
                                                   =input()
                                             space_count = count_spaces(S)
                                            print(space_count)
   32A 3BR2'
                             RESULT
                                     5 / 5 Test Cases Passed | 100 \%
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3BR2
